

FULL-STACK SOFTWARE DEVELOPER · THE BAHAMAS

Hi, I'm Justin Knowles.
I build software that **ships**.

From a live community platform used across the Bahamian islands to AI assistants, mobile security apps, and a bonded live-broadcast system — I design, build, and deploy real, production software end to end.

01 — ABOUT

A self-driven developer who finishes what he starts.

I'm a full-stack software developer based in The Bahamas. Most of what I build starts with a real problem — a Bahamian business that needs to be found online, a community that needs a place to connect, a broadcaster who can't afford a \$20,000 uplink — and ends with working, deployed software people can actually use.

My range is wide by design. I've shipped Django and React web platforms with PostgreSQL, real-time chat, and cloud storage; desktop AI assistants that listen, speak, and remember; a React Native mobile app; and a Linux-based bonded live-streaming system with its own adaptive networking logic and CI pipeline. I'm comfortable owning a project from architecture and database design through deployment and DevOps.

I'm especially motivated by technology that serves my country — tools that help Bahamian people, businesses, and institutions do more with less. I'm looking to bring that same energy to a team building technology for The Bahamas.

• LIVE

BAHAMAS

BahamUs

Solo full-stack developer · Live at bahamus242.com

A community platform for The Bahamas: a service-provider directory, marketplace, island news & events, bookings, real-time chat, and an AI chatbot — connecting Bahamian businesses and residents across the islands. Includes Google OAuth, SEO with structured data, and cloud media storage.

BAHAMAS

SYSTEMS

Bahamian Stream Backpack

Lead architect & network engineer

A portable bonded live-streaming system — a low-cost alternative to TVU One / LiveU — that broadcasts live video from anywhere in The Bahamas by bonding multiple cellular and internet links over SRT. Features an adaptive bonding controller, Linux policy-based routing, an on-device telemetry dashboard, and cloud restreaming, all under CI.

AI

DESKTOP

IRIS — AI Voice Assistant[Solo developer](#) · [Packaged Windows app](#)

A desktop AI voice assistant with push-to-talk speech recognition, natural text-to-speech, long-term memory, and multi-LLM reasoning. Shipped as a standalone Windows application — including solving non-trivial native-DLL packaging problems to make it run on any machine.

Python

PyQt6

PyInstaller

AI

OPEN SOURCE

AXON — AI PC-Control Agent[Solo developer](#) · [Public on GitHub](#)

A Jarvis-style assistant that controls a Windows PC through natural language — opening apps, clicking, typing, and reading the screen — built on Claude's tool-use API with a two-tier model router that balances speed and cost per task.

Python

PyQt6

pyautogui

Computer vision (mss)

MOBILE

SAAS

Smart Camera Hub[Solo developer](#) · [Cross-platform mobile](#)

A mobile security-camera platform with live snapshot and WebRTC feeds, AI object detection, and a privacy-first "bring-your-own-key / bring-your-own-backend" architecture aimed at B2B customers — so the customer's video and data never touch my servers.

React Native

TypeScript

Supabase

WebRTC

Zustand

CLIENT

E-COMMERCE

Perfect Puff Premium Cigars[Freelance developer](#) · [Client project \(deployed\)](#)

An e-commerce website for a Bahamian cigar retailer — product catalog, cart, an order-and-email checkout flow, and an admin-managed content system — delivered and deployed to production with persistent media storage and transactional email.
